Allowable Subject Matter

Claims 1-3, 5-9, 12, 14-17 and 20 are allowed. For the purposes of allowance, the original numbering of the claims has been changed.

The following is an examiner's statement of reasons for allowance:

The general concept of a BTSC signal encoder: comprising matrix means, sum channel processing means, and difference channel processing means was known in the art at the time of the invention as evidenced by Hanna (US 5,796,842). However, the Examiner has not found prior art that teaches or suggests the modification of Hanna in order to provide a BTSC encoder wherein a first low pass filter receives the digital left and right channel signals, in which the first low pass filter operates as a higher order IIR digital filter implemented using all-pass decomposition architecture as defined in the independent claim 1. The prior art BTSC encoders implement input high-pass filters, as discussed by the Applicant in the "Remarks" of the response dated December 4, 2008. Other prior art has been cited herein regarding BTSC encoders, however the other prior art of record also fails to teach or provide suggestion to arrive the combination of the elements and steps presented in the independent claims, again when said elements or steps are collectively considered in regards to each claim. For at least the reasons listed above, the dependent claims are also allowed in view of their respective dependencies upon the independent claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2614

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Berg et al (US 7,463,310 B2) discloses a BTSC pilot signal lock.

Hanna (US 6,118,879) discloses a BTSC encoder.
